CLOUD & DEVOPS PROFILE

Cloud & DevOps Engineer with 5+ years of experience working across AWS infrastructure, automation, CI/CD, and production support. Hands-on with Terraform, CloudFormation, Ansible, Jenkins, GitHub Actions, Docker, Kubernetes, and Python/PowerShell scripting. Brings a practical background in Windows and Linux administration, IAM, networking, monitoring, incident troubleshooting, and operational documentation.

CLOUD & DEVOPS TOOLKIT

Cloud & Infrastructure: AWS (EC2, VPC, S3, IAM, RDS, CloudWatch, Route 53, Auto Scaling, ELB), Azure, Microsoft Entra ID, Active Directory

DevOps & IaC: Terraform, CloudFormation, Ansible, Jenkins, GitHub Actions, Docker, Kubernetes, Helm, CI/CD, Git

Systems, Automation & Security: Windows, Windows Server, Linux, macOS, PowerShell, Python, Bash, Java, SQL, REST APIs, TCP/IP, DNS, DHCP, VPN, MFA, Group Policy, security groups, network ACLs, encryption, least privilege

Observability & ITSM: CloudWatch, Prometheus, Grafana, ELK Stack, ServiceNow, Jira Service Management, ITIL

PROFESSIONAL EXPERIENCE

Datara Inc. | Texas, USA

Software Engineer / Cloud Engineer | Jun 2026 – Present

- Support Windows and Linux servers, enterprise applications, and end-user systems in production. Handle hardware, software, network, VPN, cloud-connectivity, and application issues as they arise.
- Manage access and authentication through Active Directory, Microsoft Entra ID, and AWS IAM, including user permissions, group access, IAM policies, and least-privilege controls.
- Deploy and maintain AWS services including EC2, VPC, S3, IAM, RDS, CloudWatch, Route 53, Auto Scaling, and Elastic Load Balancing.
- Use Terraform, CloudFormation, and Ansible for provisioning and configuration work; build scripts in PowerShell, Python, and Bash to reduce manual operational tasks.
- Build and support Jenkins and GitHub Actions pipelines for application delivery and infrastructure changes.
- Use CloudWatch, Prometheus, Grafana, and the ELK Stack to investigate alerts, monitor application health, and troubleshoot production incidents.
- Write runbooks, deployment procedures, knowledge articles, and standard operating procedures for recurring support and operations work.

Smart & Creative Solutions Group | London, UK

Software Engineer / Cloud Engineer | Jul 2021 – Jun 2023

- Supported Windows and Linux infrastructure, virtual machines, desktops, and enterprise applications used by internal teams.
- Provided Tier 2 support and root-cause analysis for operating system, hardware, software, network, VPN, and application problems; worked with engineering, networking, and security teams to close incidents.
- Performed software deployments, operating-system upgrades, security patching, and preventive maintenance across supported environments.
- Managed user access and authentication with Active Directory, Microsoft Entra ID, and AWS IAM.
- Maintained CI/CD pipelines and infrastructure automation using Jenkins, GitHub Actions, Terraform, CloudFormation, and Ansible.

EditPoint (OPC) Pvt. Ltd. | Hyderabad, India

Desktop Support Technician | Aug 2016 – May 2019

- Delivered Tier 1 and Tier 2 support for Windows workstations, Microsoft 365, Outlook, Teams, OneDrive, SharePoint, printers, VPNs, email, and network connectivity.
- Installed and maintained Windows workstations, Microsoft Office, and Microsoft 365 applications; prepared devices for deployment and documented hardware assignments.
- Administered Active Directory accounts, password resets, group memberships, account unlocks, and access permissions; managed tickets through ServiceNow.
- Maintained asset inventory, hardware-lifecycle records, software licensing, and equipment deployment documentation.

EDUCATION & CERTIFICATION

Robert Morris University, Pittsburgh, PA | May 2025

Master of Science, Cybersecurity

University of Bedfordshire, London, UK | Jun 2021

Master of Science, Computer Science

University of Madras, Chennai, India | Apr 2016

Bachelor of Science, Computer Science

Certified Ethical Hacker (CEH) — EC-Council

CLOUD & DEVOPS PROJECTS

KubeForge — Kubernetes Cluster Qualification & Reliability Framework

Technologies: Kubernetes, AWS EKS, Terraform, Python, GitHub Actions, Docker, Helm, Prometheus, Grafana, OpenTelemetry

- Building an automated framework that provisions, tests, validates, reports on, and destroys Kubernetes clusters before production deployment.
- Writing reusable validation checks for cluster health, DNS, networking, storage, scheduling, autoscaling, RBAC/IAM, security, and workload readiness.
- Using Terraform to create AWS EKS test environments, run qualification suites, generate reports, and clean up resources after testing.
- Adding CI/CD quality gates that return structured PASS/FAIL results and stop promotion when critical infrastructure checks fail.
- Testing recovery behavior for pod failures, node failures, workload rescheduling, and service availability in controlled scenarios.

AegisOps — DevOps, Cloud & Security Operations Platform

Technologies: Python, FastAPI, PostgreSQL, React, Docker, GitHub Actions, AWS, Nmap, MITRE ATT&CK

- Building AegisOps, a full-stack DevOps and security operations platform designed to centralize infrastructure, deployment, asset, vulnerability, and security-event visibility.
- Developing the platform using Python, FastAPI, PostgreSQL, SQLAlchemy, React, Docker, and GitHub Actions, with REST APIs for environment management, deployment tracking, asset inventory, security events, vulnerabilities, alerts, incidents, and detection rules.
- Implementing CI/CD workflows with GitHub Actions for automated testing, Ruff code-quality checks, Nmap dependency setup, and Docker image build validation.
- Developing Nmap-based infrastructure discovery and SIEM-style detection capabilities, including SSH brute-force detection, automated alerting, incident correlation, risk tracking, and MITRE ATT&CK mapping.
- Integrating AWS CloudTrail event processing and cloud deployment tracking, including application versions, container images, Git commit SHAs, deployment status, and environment metadata.
