PROFESSIONAL SUMMARY

IT and Cloud Engineer with 5+ years of experience supporting enterprise infrastructure, cloud environments, end-user systems, and production operations. Experienced across AWS, Azure, Windows, Linux, networking, identity and access management, automation, CI/CD, and infrastructure support, with a strong foundation in troubleshooting and operational reliability. Hands-on experience with AWS, Azure, Terraform, CloudFormation, Ansible, Jenkins, GitHub Actions, Docker, Kubernetes, PowerShell, Python, and Bash for infrastructure provisioning, deployment automation, configuration management, and operational support. Skilled in Active Directory, Microsoft Entra ID, AWS IAM, Microsoft 365, TCP/IP, DNS, DHCP, VPNs, monitoring, incident management, and production troubleshooting.

Strong understanding of DevOps and cloud engineering practices, including Infrastructure as Code (IaC), CI/CD pipelines, cloud infrastructure management, system administration, automation, monitoring, security, and incident resolution. Proven ability to troubleshoot complex infrastructure and application issues, automate repetitive operational tasks, collaborate across engineering, networking, and security teams, and maintain secure, scalable, highly available, and reliable environments.

WORK EXPERIENCE

Datara INC, TX , USA.

Software Engineer | Cloud Engineer

Jun 2026 – Present

Responsibilities:

- Supported Windows and Linux servers, desktops, and enterprise applications across production environments, ensuring system availability and operational reliability.
- Installed, configured, upgraded, and maintained Windows operating systems, enterprise software, development tools, and virtual machines.
- Provided Tier 2 technical support for hardware, software, operating system, network, VPN, and application-related issues, performing root cause analysis to minimize downtime.
- Managed user accounts, access permissions, and authentication using Active Directory, Microsoft Entra ID (Azure AD), and AWS IAM.
- Performed software deployment, system upgrades, security patching, and preventive maintenance to ensure system stability and compliance.
- Troubleshoot Windows, Linux, networking, cloud connectivity, and application issues, collaborating with cross-functional teams to resolve incidents efficiently.
- Developed automation scripts using PowerShell, Python, and Bash to streamline system administration, software deployment, and operational tasks.
- Deployed and supported AWS infrastructure, including EC2, VPC, S3, IAM, RDS, CloudWatch, Route 53, Auto Scaling, and Elastic Load Balancing.
- Monitored infrastructure health and application performance using CloudWatch, Prometheus, Grafana, and the ELK Stack, proactively identifying and resolving production issues.
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions and automated infrastructure provisioning with Terraform, CloudFormation, and Ansible.
- Configured security controls, including IAM policies, security groups, network ACLs, encryption, and least-privilege access controls to strengthen cloud security.
- Created technical documentation, knowledge base articles, deployment procedures, operational runbooks, and standard operating procedures to support end users and IT operations.

Skills: AWS, Azure, EC2, VPC, S3, IAM, RDS, CloudFormation, Terraform, Docker, Kubernetes, Jenkins, GitHub Action, Python, Java, Bash, Linux, SQL, REST APIs, Git, CI/CD, Infrastructure as Code, Cloud Security, CloudWatch, Prometheus, Grafana, ELK Stack, Agile, Scrum

SMART & CREATIVE SOLUTIONS GROUP, London, UK.

Software Engineer | Cloud Engineer

July 2021 – Jun 2023

Responsibilities:

- Supported Windows and Linux servers, desktops, and enterprise applications across production environments, ensuring system availability and operational reliability.
- Installed, configured, upgraded, and maintained Windows operating systems, enterprise software, development tools, and virtual machines.

- Provided Tier 2 technical support for hardware, software, operating system, network, VPN, and application-related issues, performing root cause analysis to minimize downtime.
- Managed user accounts, access permissions, and authentication using Active Directory, Microsoft Entra ID (Azure AD), and AWS IAM.
- Performed software deployment, system upgrades, security patching, and preventive maintenance to ensure system stability and compliance.
- Troubleshoot Windows, Linux, networking, cloud connectivity, and application issues, collaborating with cross-functional teams to resolve incidents efficiently.
- Developed automation scripts using PowerShell, Python, and Bash to streamline system administration, software deployment, and operational tasks.
- Deployed and supported AWS infrastructure, including EC2, VPC, S3, IAM, RDS, CloudWatch, Route 53, Auto Scaling, and Elastic Load Balancing.
- Monitored infrastructure health and application performance using CloudWatch, Prometheus, Grafana, and the ELK Stack, proactively identifying and resolving production issues.
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions and automated infrastructure provisioning with Terraform, CloudFormation, and Ansible.
- Configured security controls, including IAM policies, security groups, network ACLs, encryption, and least-privilege access controls to strengthen cloud security.
- Created technical documentation, knowledge base articles, deployment procedures, operational runbooks, and standard operating procedures to support end users and IT operations.

Skills: AWS, Azure, EC2, VPC, S3, IAM, RDS, CloudFormation, Terraform, Docker, Kubernetes, Jenkins, GitHub Action, Python, Java, Bash, Linux, SQL, REST APIs, Git, CI/CD, Infrastructure as Code, Cloud Security, CloudWatch, Prometheus, Grafana, ELK Stack, Agile, Scrum

EDITPOINT (OPC). Pvt. LTD, Hyderabad, INDIA

Desktop Support Technician

Aug 2016 – May 2019

Provided Tier 1 and Tier 2 desktop support to over 300 end users in a Windows enterprise environment, delivering timely technical assistance for hardware, software, network, and Microsoft 365 issues while maintaining high customer satisfaction and meeting service level agreements (SLAs).

Responsibilities:

- Installed, configured, upgraded, and maintained Windows 10/11 workstations, Microsoft Office, Microsoft 365, Outlook, Teams, OneDrive, and SharePoint.
- Administered Active Directory user accounts, password resets, group memberships, account unlocks, and access permissions.
- Diagnosed and resolved hardware, software, operating system, printer, VPN, email, and network connectivity issues.
- Managed incidents, service requests, and change requests using ServiceNow while meeting established SLA targets.
- Maintained IT asset inventory, hardware lifecycle records, software licensing, and equipment deployment documentation.

SKILLS

Technical Skills

- **Desktop & End-User Support:** Desktop Support, IT Help Desk, Technical Support, Tier 1 & Tier 2 Support, End-User Support, Remote Support, Customer Service, Incident Management, Service Request Management, ITIL
- **Operating Systems:** Windows 10/11, Windows Server, macOS, Linux
- **Microsoft Technologies:** Microsoft 365, Microsoft Office Suite, Outlook, Teams, OneDrive, SharePoint, Active Directory, Microsoft Entra ID (Azure AD), Group Policy
- **Hardware & Software:** Desktop/Laptop Deployment, Hardware Installation & Troubleshooting, Software Installation & Configuration, OS Imaging & Deployment, Printer & Peripheral Support, Device Setup
- **Networking:** TCP/IP, DNS, DHCP, VPN, Wi-Fi, LAN/WAN, Subnetting, Network Connectivity Troubleshooting, Remote Desktop Protocol (RDP)
- **Endpoint Management:** Microsoft Intune, SCCM (Microsoft Configuration Manager), JAMF (macOS), Endpoint Security, Patch Management, Antivirus Administration
- **Ticketing Systems:** ServiceNow, Jira Service Management, Zendesk, Remedy
- **Cloud Technologies:** Microsoft Azure, Microsoft Entra ID, AWS (EC2, IAM, S3), Microsoft 365 Administration
- **Security:** Multi-Factor Authentication (MFA), Identity & Access Management (IAM), Password Resets, Security Awareness, Endpoint Protection, BitLocker, Microsoft Defender

- **Scripting & Automation:** PowerShell, Bash, Python.
- **Monitoring & Diagnostics:** Event Viewer, Task Manager, Performance Monitor, Wireshark, Remote Desktop, Log Analysis
- **Professional Skills:** Troubleshooting, Root Cause Analysis, Problem Solving, Communication, Documentation, Asset Management, Time Management, Team Collaboration

EDUCATION

ROBERT MORRIS UNIVERSITY, Pittsburgh, PA

May 2025

Master of Science (Major in Cybersecurity)

UNIVERSITY of BEDFORDSHIRE, London, UK

Jun 2021

Master of Science (Major in Cybersecurity)

UNIVERSITY OF MADRAS, Chennai, INDIA

April 2016

Bachelor of Science (Computer Science)

PROJECTS

KubeForge — Kubernetes Cluster Qualification & Reliability Framework

Independent DevOps Project | In Development

Technologies: Kubernetes, AWS EKS, Terraform, Python, GitHub Actions, Docker, Helm, Prometheus, Grafana, OpenTelemetry

- Designing and developing an automated Kubernetes cluster qualification framework to provision, test, validate, and destroy clusters while identifying infrastructure defects before production deployment.
- Building reusable validation suites for cluster health, DNS, networking, storage, scheduling, autoscaling, RBAC/IAM, security, and workload readiness, with structured PASS/FAIL results.
- Developing Terraform-based AWS EKS provisioning and automated lifecycle workflows to create ephemeral test environments, execute qualification suites, generate reports, and safely destroy infrastructure.
- Designing CI/CD quality gates to run Kubernetes infrastructure tests automatically and block promotion when critical cluster validation checks fail.
- Building resilience and failure-testing capabilities to validate pod recovery, node failures, workload rescheduling, service availability, and cluster recovery under controlled fault scenarios.
- Architecting extensible test and provider interfaces to support additional Kubernetes environments and future EKS, AKS, and GKE qualification.

AegisForge — DevSecOps & SOC Automation Platform

Technologies: Python, FastAPI, React, PostgreSQL, Docker, Kubernetes, Terraform, AWS, GitHub Actions, Nmap, SIEM, MITRE ATT&CK

- Developing a full-stack DevSecOps and SOC automation platform combining infrastructure automation, CI/CD, security monitoring, detection engineering, and incident management in a centralized dashboard.
- Built asset and service discovery using Nmap, storing discovered infrastructure and network-service information in PostgreSQL for centralized asset visibility.
- Developed a SIEM-style security event pipeline to ingest and analyze security events and generate actionable alerts based on configurable detection rules.
- Implemented detection engineering workflows, including SSH brute-force detection using event thresholds and automated alert generation.
- Integrated MITRE ATT&CK mapping to associate security detections and events with relevant adversary techniques for SOC investigation.
- Built SOC incident and alert management APIs using Python/FastAPI with workflows for severity, status, investigation, and remediation tracking.
- Developing Terraform, Docker, Kubernetes, and CI/CD integrations to connect infrastructure provisioning and application deployments with security monitoring.
- Building a React operations dashboard providing unified visibility across assets, vulnerabilities, security events, alerts, incidents, infrastructure environments, and deployments.

CERFITICATIONS

Certified Ethical Hacker (CEH) – EC-Council
